

Watershed & Stormwater Management

—2011 WEBCAST SERIES—

The Center for Watershed Protection is proud to continue our webcast series on watershed and stormwater management.

The advantages of the Center's Webcasts include:

- Your entire staff can train along with you for no additional cost! When you enroll, you're entitled to unlimited participants per connection.
- Webcasts packed with information and resources for watershed practitioners and policy makers.
- Our presenters have a proven track record of delivering subject materials and have consistently received high ratings by past attendees.
- Our webcasts may possibly be used to earn Continuing Education Units

Current Line Up of 2011 Webcasts (Based on Eastern Time)

W-1 Wednesday, March 16, 2011 from 12-2 ET

Design, Installation & Maintenance of Constructed Wetlands & Regenerative Stormwater

Learn how to boost the performance of constructed wetland designs, and what research is telling us about runoff reduction and pollutant removal rates. You will also be introduced to "regenerative stormwater conveyance," an innovative approach to convey and treat runoff and restore habitats, originally developed as an alternative outfall design for coastal plain sites.

W-2 Wednesday May 18, 2011 from 12-2 ET

Ultra-Urban Stormwater Design and Retrofitting

Watershed professionals face many unique challenges when integrating effective stormwater management into our urban landscapes, streetscapes, and other elements of the built environment. This webcast will profile innovative forms of urban bioretention and other BMPs, and will also address setting an appropriate mitigation or offset fee for sites where full compliance is not possible.

W-3 Wednesday July 13, 2011 from 12-2 ET

The Top Actions that Local Governments can take to address Numerical Goals, such as TMDLs & WIPs

This webcast will present CWP's list of top performing (and often overlooked and underappreciated) management practices. We will help you quantify the benefits of practices such as urban watershed forestry, urban nutrient management, illicit discharge detection and elimination, and large and small retrofits.

W-4 Wednesday September 14, 2011 from 12-2 ET

Rainwater Harvesting as a Stormwater Management Practice

Rainwater Harvesting is a multi-tasking BMP - however its use for stormwater management is not yet widespread, and there have been questions about how to credit volume and pollutant reductions from the practice. This webcast will address different storage and reuse configurations and some quantitative methods to account for stormwater benefits. Several case studies will be presented.

W-5 Wednesday November 16, 2011 from 12-2 ET

Stream Restoration

Stream Restoration is a multibillion dollar industry worldwide. In fact, the explosion of stream restoration as a watershed management practice has helped create another series of questions regarding the effectiveness of stream restoration in meeting overall watershed and project-specific goals. This webcast will get to the root of the issue and present different points of view from academia, watershed managers and stream restoration practitioners.

Early bird and multiple webcast purchase specials are available to save money.
